

Study program :Chemistry				
Type and level of studies:graduate - PhD studies				
<b>Course unit: Selected chapters of bioorganic chemistry</b>				
<b>Teacher in charge : Petrović D. Zorica</b>				
Language of instruction - English				
ECTS: 10				
Prerequisites: - enrolled doctoral studies				
Semester: Summer Semester				
<b>Course unit objective</b>				
In order to understand the complex biochemical processes of life, it is necessary to understand the connection between structure and role of bioactive compounds in the body. Special attention will be devoted to the study of enzymes and some of their reactions. Also, the goal of this course is that students to become familiar with biomimetic chemistry, and learn about the methods and model systems by which is possible to imitate the complex processes that occur in a cell. In addition, students will learn about the basics of Supramolecular chemistry.				
<b>Learning outcomes of Course unit</b>				
It is expected that the student, after passing the examination in bioorganic chemistry, understand the significance of the structure and role of enzymes and other biomolecules in the body. In addition, it can be considered that the candidates understood the importance and role of the synthetic model-systems in bioorganskoj chemistry.				
<b>Course unit contents</b>				
<i>Theoretical classes:</i>				
The relationship of the structure and biological activity of organic compounds. Supramolecular chemistry. Supramolecular assemblies, natural and synthetic supramolecular. Molecular recognition and catalysis, model systems. The synthesis of peptides, nucleosides, and their analogs. Introduction to the enzymatic catalysis. The mechanisms of enzymatic reactions. Hydrolytic enzymes and enzymes that catalyze the formation of a new carbon-carbon bond. Functionalized cyclodextrins, crown ethers and cryptands as enzyme model systems. Enzymes and coenzymes involved in the creation of new carbon-carbon bonds. Molecular moving in the body. Vitamin B12. Enzyme inhibitors and their importance in biomedicine. DNA as the receptor. Organic antitumor agents.				
<i>Practical classes:</i>				
Practical work is coordinated with the lectures and carried out in the form of experimental exercises.				
<b>Literature</b>

3. Petrović. Z.D., Simijonović D., Petrović V.P., Bioorganic chemistry – practicum, Faculty of Science, Kragujevac 2018.				
<b>Number of active teaching hours</b>				<b>Other classes</b>
Lectures: 2	Practice: 2	Other forms of classes: consultations, mentoring system	Independent work: Seminars	
<b>Teaching methods</b>				
Lectures, consultations, experimental work, seminars, colloquia				
<b>Examination methods ( maximum 100 points)</b>				
<b>Exam prerequisites</b>	<b>No. of points:</b>	<b>Final exam</b>	<b>No. of points:</b>	
Student's activity during lectures	5	oral examination	-	
practical classes/tests	-	written examination	30	
Seminars/homework	15	.....		
Project				
Colloquium/ Colloquiums	50			

<b>Grading system</b>		
<b>Grade</b>	<b>No. of points</b>	<b>Description</b>
<b>10</b>	91-100....	Excellent
<b>9</b>	81-90....	Exceptionally good
<b>8</b>	71-80....	Very good
<b>7</b>	61-70....	Good
<b>6</b>	51-60....	Passing
<b>5</b>	....	Failing
